睛明 Bl1

Jīngmíng

Helle des Auges — Verbindungs- und Zusammenkunftspunkt

Anatomische Lage:

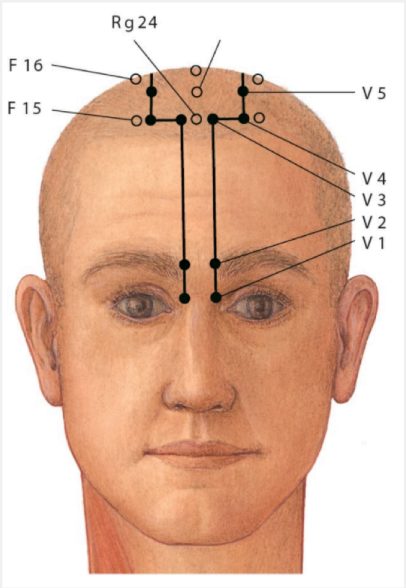
0,1 cun medial und oberhalb des inneren Augenkanthus nahe der medialen Orbitakante.

Lokalisation:

Lokalisation in einer Vertiefung leicht medial und oberhalb des medialen canthus nasalis, nahe der knöchernen Begrenzung der Nasenwurzel und des medialen Randes der Orbita.

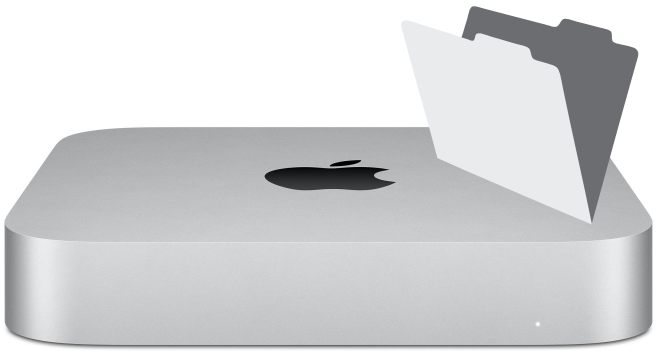
Nadelung:

Senkrecht 0,2 cun–0,3 cun.
Man bittet den Patienten, die Augen zu schließen und mit den Augen möglichst weit in die Richtung der zu nadelnden Seite zu blicken. Wird zum Beispiel Jīngmíng Bl-1 links genadelt, sollte der Patient nach links schauen und umgekehrt. Mit dem Zeigefinger einer Hand drückt man den Augapfel vorsichtig nach lateral und hält ihn fixiert. Mit der anderen Hand sticht man die Nadel langsam



FileMaker solution for managing distributed FileMaker Servers

- **Built on top of existing inventory solution**
- **Each remote server connects home via SSH**
  Eliminates necessity to open ports on remote network's firewall
- **Standards-based screen sharing**
  VNC protocol is used through SSH tunnel
- **Gathers FileMaker Server status information**
  Allows to monitor count of open files, connections, and backups
- **Automatic refresh of status information***
  Servers are queried at regular intervals
- **On-demand update**
  Status information can be updated manually by operator
- **Maintenance templates**
  Curated collections of automated steps to setup and upgrade software
- **Maintenance documentation**
  Results and execution times are stored
- **SSH key management**
  Key pairs are re-generated for every server and user account



* Third-party FileMaker Plug-In required
